Use less. Spend less. Do more.

ATTIC INSULATION - APPLICATION

Applications will only be processed if fully completed and signed. Once completed, submit application and proof of purchase to your electric provider. Contact your local utility with any questions.

1. **Customer Name:** _____ Utility: _____

Account #: _____ Phone #: _____

Address & City: _____

Installation Address & City (if different from above): _____

2. **Name of Contractor** (if applicable or note "self-installed"): _____

Address & City: _____

3. Insulation Information:

Total attic area	Total area insulated	Existing depth before adding insulation	New insulation added	Total depth after adding insulation
Sq. Ft.	Sq. Ft.	In.	In.	In.

Type of new insulation: Loose fill Fiberglass batt Rigid foam board Other

Primary Heating:

- Electric furnace
- Baseboard
- Cove heating
- Geothermal Heat Pump
- Air-Source Heat Pump – fossil fuel
- Air-Source Heat Pump – with electric furnace

Primary Cooling:

- Heat Pump
- Central air-conditioner
- Window AC
- None

Rebate amount: _____ sq. ft. x \$0.15 = \$ _____ (not to exceed \$300 per dwelling)

Area to be insulated must originally average six inches or less of insulation and add at least six inches or R-19 to the attic. To be eligible, customers must have a heat pump, electric furnace, or electric heat (baseboard, radiant, etc.) Installations must be in compliance with program terms and conditions.

Owner: _____
Print Name Signature Date

Contractor: _____
(if applicable) Print Name Signature Date

4. Application Process:

Complete application and submit with proof of purchase to your local electric utility. Program guide lines can be found at www.EnergyWiseNebraska.com. Participating utilities have the right to limit the quantity of incentives.

Keep heated and cooled air where it should be — inside your home

Do you know that new homes built in Nebraska are required to have R-38 or R-45 insulation in the attic? It takes 12 to 15 inches of blown-in cellulose to accomplish that! If your home has six inches or less, and you use primarily electricity to heat it, there is an EnergyWiseSM program to help you. Attics are places where it can really pay to have the right amount of insulation. Making sure your home's insulation level is adequate keeps heated and cooled air where it should be: inside your home, and the outside air temperature stays where it should be: outside!

To help make it affordable, customers participating in the residential EnergyWiseSM attic insulation program are eligible for an incentive of \$.15 / square foot with a maximum incentive amount of \$300 per existing residential dwelling. New construction and/or additions do not qualify.

Start with your attic

On a sunny summer day, with the hot sun blasting directly on the roof, attics can get up to 140°F when the inside of the house is 75°F. That is a 65°F temperature differential.

Your house acts like a chimney in the winter, where cooler air enters the house in the lower areas and attempts to exit the house in the warmer – higher areas. A house with a poor and leaky envelope will show significant heat loss through the attic and eaves.

If you have little insulation in the attic (six inches or less on average) and add at least six inches or R-19, take advantage of this EnergyWiseSM Residential Insulation Program. To be eligible, customers must have a heat pump or electric furnace or electric heat (baseboard, radiant, etc.).
